

LIGHTWEIGHT UNDERGARMENT

A garment made of a patented lightweight, three-layer SMS fabric designed to act as a wicking layer between coveralls and the wearer's skin. The fabric works with the body's natural evaporation action to lift sweat away from the skin.

- Wicking fabric absorbs sweat for added comfort
- Dries quickly for longer use
- Disposable and convenient with low cost in-use

Typical Uses

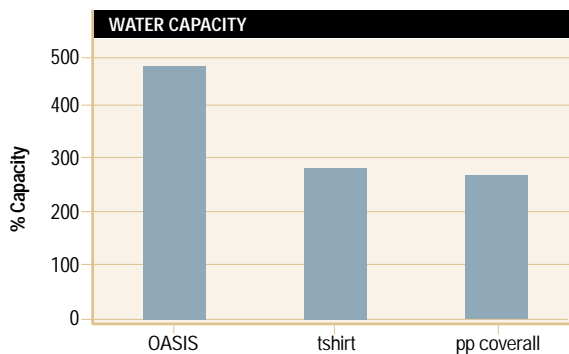

Ideal for:

- Undergarment for Level A/B encapsulated suits
- Undergarment for chemical protection coveralls

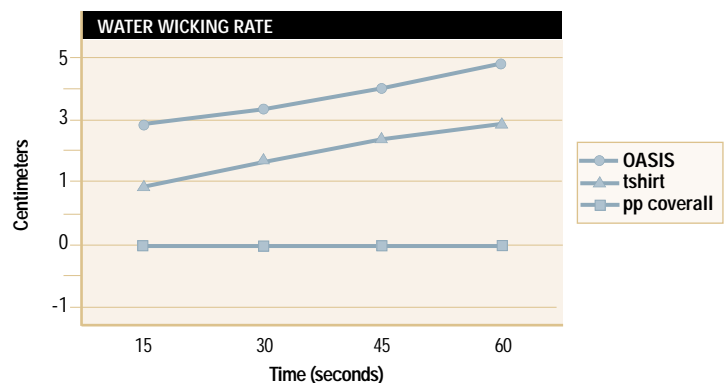

COVERALL — Blue

Zipper front, elastic back, wrists, ankles

STYLE	SIZE	CASE COUNT
58402	M	12
58403	L	12
58404	X L	12
58405	XX L	12
58406	XXX L	10

Water capacity measures the amount of liquid absorbed by the garment. Higher numbers indicate increased ability to remove sweat from the wearer's skin.

High wicking rate means fluid spreads over a larger area. OASIS* garments dry quicker than cotton clothing during breaks.
